Session: 01

SUMMARY OF INFORMATION:

1. Describe the target site: The site is a structure to structure interface. It is multi-leveled, and made of metal and concrete. There is a feeling of "doubled" to the site, giving the feeling that each of the multiple levels tend to serve the same purposes.

There is a general quietness to the site, with a low-toned "random rumbling" as a background noise. On the upper story there is a definite feeling of random physical vibrations which can be felt in the floor and/or walls. A portion of the concrete flooring is cracked and uneven.

Several small, squarish, round-edged "manmades" are somehow associated with the site. They appear to move, and gave the impression that they were cars.

2. Describe the activity at the site:

a. The beacon was standing with her back to a wall, taking a picture of the scene. She was chewing gum.

b. Significant site-related activity appeared to be only people walking and vehicles (apparently cars) moving to, from, and through the site.
